

Astra J

R-LED
Freude am Licht

Insignia

LED numberplate-light

instructions manual

R-LED manual

Caution: you do all work on own risk, R-LED do not responsibility for the work

The product is special made for Opel/Vauxhall models so the installation is very easy.

LEDs and Check+ already build-in in factory. You get 2 new original GM cases.

So you must only change the complete case at the car.

You need just a screwdriver (spiky).

First: You must deinstall the original case at the car.
Press the clip.

R-LED manual

push it out

Second: Remove the connector
push the plug

R-LED manual

now you see the plug:

Now just push strong the LED modul at this plug and it back in the bumper.

if you have problems just write us an e-mail:
info@R-LED.de

we will help you by any problem.

About R-LED:

Ratisbona-LED was founded in 2006 by an Ex Osram Opto employee in Regensburg (celtic: Ratisbona), South-Germany.

The target was to develop high quality LED products especially for cars and specific models.

In 2009 R-LED developed the innovative "Check+" to avoid the error message by the "Full Can-Bus Generation" Opel/Vauxhall cars like Astra J and Meriva.

Only with engineering direct at the car it is possible to make high quality LED products which look perfect, easy to mounting and work without error signal.

R-LED use only the best LEDs from market leader like Osram OS, Samsung or Epi Star.

R-LED is not an ebay/china reseller who sold cheap china LED products. Our products were 100% engineered in Germany. The final product step and quality management were also there.

You can be certain of this: All products for a car model were complex tested on that car and work perfect on it. No error code or short circuit. New products were only released when they accomplish our high claim and are easy and save to fit.
